

ASHUTOSH

UI/UX DESIGNER

Delhi, India • +91 88103 13719 • ashusinghaniya69@gmail.com • ashusinghaniya69-tech.github.io

PROFESSIONAL SUMMARY

Fresher UI/UX designer with hands-on project experience in dashboard and mobile app design, built through self-directed practice and certification coursework. Applies design thinking and accessibility principles (WCAG) to translate requirements into high-fidelity, mobile-first prototypes. Comfortable using AI-assisted workflows to accelerate design exploration while independently reviewing and refining every output. Currently balancing full-time work with active UI/UX upskilling.

SKILLS

Design & Research: User Research, Information Architecture, Wireframing, Rapid Prototyping, Usability Heuristics, Interaction Design, Design Systems, Design Thinking, Accessibility (WCAG)

Tools: Figma, FigJam, Adobe XD, Photoshop, Illustrator, VS Code

Technical: HTML5, CSS3, Responsive Design, Mobile-First Design, Design-to-Code Handoff, AI-Assisted Design Workflows

SELF-DIRECTED PROJECTS

Fintech Analytics Dashboard | Self-Directed Project

Practice project built to strengthen data-dense UI and design-system skills

- Redesigned a data-dense, multi-account dashboard by applying design thinking to fix poor navigation and weak data readability — common drop-off points in similar real-world products.
- Built a modular, tokenized design system in Figma to keep components consistent across screens and closer to a real design-to-dev handoff structure.
- Reviewed the layout against WCAG contrast and navigation guidelines to build accessibility-first habits into the process.

Metro Banking Mobile App | Self-Directed Project

Practice project built to strengthen mobile flow and security/usability trade-off design

- Designed an end-to-end mobile banking experience covering biometric login and fund transfers using a mobile-first approach, balancing security and speed as competing constraints.
- Studied competitor banking apps and mapped user journeys to identify likely drop-off points in transactional flows.
- Built high-fidelity, clickable prototypes with micro-interactions to practice presenting design rationale as if walking stakeholders through a real handoff.

Analytics Admin Panel (Pulsewave) | Self-Directed Project

Practice project built to strengthen dashboard and data-visualization design

- Designed a dark-mode analytics dashboard combining charts, funnels, heatmaps, and live event feeds to practice simplifying dense product data.
- Applied design thinking to restructure user activity, revenue, retention, and regional metrics into a single intuitive, scannable interface.
- Explored an alternate layout for the live event feed module and compared both against usability heuristics before selecting the final design.

EXPERIENCE

Pharmacy Associate | Roopchand Hospital | 2023 – Present

- Handled customer queries and daily workflow processes, building a strong understanding of user pain points now applied to designing intuitive digital interfaces.
- Managed medicine dispensing and inventory coordination with accuracy, maintaining strong attention to detail under time-sensitive conditions.
- Balanced full-time hospital pharmacy responsibilities with UI/UX design education, demonstrating strong discipline, time management, and multitasking ability.

EDUCATION

UI/UX Design Certification | DICS Academy, Delhi

Specialization in user research, design systems, and micro-interactions.

Bachelor of Arts (B.A.) | Delhi University

KEY STRENGTHS

- Analytical precision — meticulous attention to layout, typography, and spacing for professional-grade UI.
- Design advocacy — articulates design rationale clearly and backs decisions with reasoning when presenting to others.
- Collaborative mindset — self-motivated, receptive to feedback, and adaptable to fast-paced environments.
